
Rear current-derived torque under vigorous policy commands
No shaft sensor, bus voltage or exact A1 acquisition timestamp: this is evidence of a response gap, not an identified envelope
Every active paired sample, no fitted time shift
A1 × Kt torque magnitude (Nm)
Held encoded C0 request magnitude (Nm)
Equal magnitude
Rear encoder speed magnitude (rad/s)
Large requests: speed and direction context
Request magnitude − A1 torque magnitude (Nm)
Rear encoder speed magnitude (rad/s)
Request >3 Nm, torque same direction as speed
Request >3 Nm, torque opposite to speed
