Steering position (deg)
Rear torque (N m)
Evaluation time (s)
Scaled raw policy output
Held steering target entering PD
Actual simulated steering position
Motor torque submitted to PhysX
Solver-measured joint-axis effort
Episode spawn
50 Hz policy / 400 Hz physics · 0–60 s · red: spawns (including boundary resets) · independent linear axes · no smoothing/time shift
All samples visible; distant motor-cap references do not stretch the axes.
